

How to Care for your Glass Fence

Very little maintenance is required for your glass fence but there are some general guidelines you should be aware of.

1. Do not attach any type of plants to the fence.
2. Do not use a glass fence as a retaining wall.
3. Do not change the grade of your property. This can impede the flow of water. Your lot was graded per local building codes to ensure proper water drainage.
4. The glass is tempered or safety glass similar to your car window.
5. Clean glass regularly with soap & water and towel dry. A window cleaner similar to what you would use on your car window can be used as a second option but it is not recommended.
6. Inspect your glass fence yearly to look for any areas that may be loose. This is rare but a yearly inspection is recommended.
7. Generally, a glass fence sits on top of a retaining wall. Follow the maintenance instructions provided by the company that installed your retaining wall.
